

資料庫管理(二) week4

B10523030 簡聿均 (因無法到校上課，以作業方式計分)

創建 Table

創建成功

抓取資料庫內容

The screenshot shows the phpMyAdmin web interface in a browser. The address bar indicates the URL is `localhost/phpmyadmin/tbl_sql.php?db=資料庫管理&table=`. The left sidebar displays a tree view of databases, with '資料庫管理' (Database Management) selected and expanded to show the 'emp' table. The table structure shows columns: empno (int), ename (int), hiredate (int), and sal (int). The main panel is titled '在資料表 資料庫管理.emp 執行 SQL 查詢:' and contains a SQL query:

```
1 SELECT empno, ename, sal*12, hiredate
2 FROM emp
3 WHERE deptno = 30;
```

Below the query editor, there are buttons for 'SELECT *', 'SELECT', 'INSERT', and 'UPDATE'. A checkbox for '繫結參數' (Bind parameters) is present. At the bottom, there is a text input field labeled '將此 SQL 查詢加為書籤:' (Add this SQL query as a bookmark:).
